

## Doyle Conservation Center The Trustees of Reservations

**Client**  
The Trustees of Reservations  
Leominster, MA

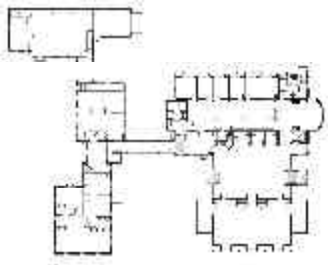

**Cost**  
\$3,700,00

**Completion**  
2004

**Noteworthy Project Goal**  
LEED Gold Rating or Higher

Hines Wasser & Associates LLC

The design goal for this project is to develop a state-of-the-art administrative and training facility for a nonprofit member-supported conservation organization. The new center supports critical mission-driven activities: land conservation, planning and ecology, historic resources, education and interpretation, and volunteer management.

The design phase follows an extensive strategic planning effort that identified projected growth needs over the next ten years and studied uses for the 350-acre Doyle Reservation. The final design will reflect staff additions and advances in technology, will raise the organization's profile through innovative design, and will meet the standards of a LEED Gold-Certified or higher building. The project involves three-phase implementation of new construction and adaptive reuse of the complex over a ten year period.

When completed, the Doyle Center will house key departments, along with archives for the organization and its properties. The end result is envisioned as an institute for land conservation study, training, and mentoring that will serve the hundreds of municipal conservation efforts and small volunteer-run land trusts throughout the region.
