

MITRE corporation

MITRE corporation, Bedford

Project Type: Corporate center

Renewables: Photovoltaics

The MITRE Corporation, a prominent research and development corporation focused on projects in the public interest, is planning a new 96,000 square foot, state-of-the-art employee center and gateway building for its campus in Bedford. The project will include numerous green building elements and is expected to meet many LEED criteria. Through a \$20,000 feasibility study funded by MTC, MITRE expanded on anticipated green building measures to develop an integrated plan for energy efficiency and renewable energy elements in the project. Using its current \$415,000 MTC grant, MITRE will construct a 12.5 kilowatt photovoltaic canopy marking the building's entrance and will install 16.5 additional kilowatts of photovoltaics on the building's roof. This project will serve as a pioneering example of integrated renewable energy and energy efficiency in corporate headquarter projects.
